

Project API

API Endpoint

This forms part of the base URL through which the API is accessed; for example

<http://localhost:3003/>

This base URL will be represented in the rest of the document as `${apiBaseUrl}`.

Fetching Users

Used to fetch the data of all users with basic pagination.

URL	<code>\${apiBaseUrl}/users</code>
Method	POST
Authentication	No

Example

POST <http://localhost:3003/users>

```
{
  "id": 1,
  "first_name": "deepak",
  "last_name": "tomar",
  "avatar": "none"
}
```

Fetching User's Friends

Used to fetch the data of user's friends.

URL	<code>\${ apiBaseUrl }/usersfriends</code>
Method	POST
Authentication	No

Example

POST <http://localhost:3003/usersfriends>

```
{
  "id": 2,
  "user_id": "2",
  "first_name": "mohit",
  "friend": "rahul"
},
```

Fetching User's friends of friends

Used to fetch the data of user's friends of friends.

URL	\${ apiBaseUrl }/usersfriendsOFfriends
Method	POST
Authentication	No

Example

POST <http://localhost:3003/usersfriendsOFfriends>

```
{  
  "id": 2,  
  "user_id": "2",  
  "first_name": "mohit",  
  "friend": "rahul",  
  "friendsOFfriend": "deepak",  
},
```
